

ANTIMICROBIAL COVID-19 PROTECTION

Nanoman Antimicrobial is a long-lasting surface coating engineered to destroy viruses and bacteria on contact over an extended period of time.

APPLICATION PROVIDES AN ADDITIONAL LAYER OF PROTECTION IN THE FIGHT AGAINST COVID-19.

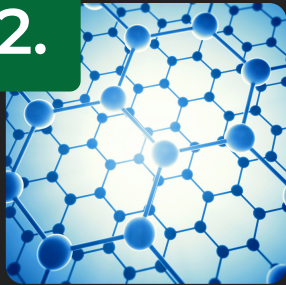

1.

Long Lasting Protection

Nanoman Antimicrobial not only kills microbes upon application but also provides continued effectiveness post application.

2.

Game Changer

Nanoman Antimicrobial destroys bacteria and viruses, including Covid-19 on application to a surface. It then creates a firewall against new contamination by placing millions of nano swords onto the surface that continue to destroy bacteria and viruses without the need for constant re-application or disinfection.

3.

Surface Modifier

The coating bonds with the surface material at a molecular level making the whole surface antimicrobial. It can withstand constant touching and is resistant to common cleaning products.

4.

Scientifically Tested & Approved

Registered with the Therapeutic Goods Administration to be effective on hard surfaces against viruses such as Covid-19 (all mutations), bacteria and germs.

5.

Cost Effective

The ongoing cost throughout the year of common disinfectant of a 10m² area = \$2200. Nanoman Antimicrobial equates to a yearly cost of just \$36 per 10m².

• Disinfectant based on area of 10m² cost of \$10 p/lit, 150ml to treat 10m², including a 10 min labour cost per application at \$27.50 p/hr. Nanoman Antimicrobial based on area of 10m² cost of \$90 p/lit, 150ml to treat 10m², including a 10 min labour cost per application at \$27.50 p/hr.
